

Index

- Ackerman, Bruce, and 'liberalism' for land and wealth, 110
- Adaptability, of humans to environment, 46
- Africa: enclosure conflicts in, 138, 171; land tenure in, 103; future birth rates, 171. See also Desert; South Africa
- Agriculture: effects of development of on population, enabling resource accumulation, 49; sustainable practices of damaged by Philippine resettlement policies, 73; decline of family farm in, 91-92; protectionism of harms all nations, 93-94; higher productivity of family farm in, 94; transformation from subsistence to commercial, 98
- Aid programs, and contraception, 22-23, 167; tendency of to benefit large landowners and exacerbate poverty, 90
- AIDS, as example of exponential growth rate, 47-48
- Altruism, as marginal, not primary, motive of individual, 36
- Amazon. See Brazil
- Andelson, Robert V., on population control, 15-16
- Anderson, Jay M., on industrial tax for commons use, 39
- Antarctics: nations' claims to, 133; as new Last Commons, future Remnant Commons, 133; Mineral Convention, 160
- Aristotle, on tragedy of the commons, 173
- Asia, examples of enclosure conflicts in, 137
- Atmosphere, as unmanaged, polluted commons, 178-79
- Baal, land tenure in, 83
- Baden, John, on population growth rate, 31; and Richard Stroup, on Hutterites and ideal community size relative to goods distribution, 179-80
- Benefits, locationally or socially produced, allocation of, 2. See also Goods
- Benign Demographic Transition. See Demographic transition
- Bennett, Jon and Susan George, on shift from independent to dependent labour force, 104
- Bloom, Bridget, on European Economic Community as boon to larger farms, 91
- Boserup, Ester, on predicted higher African birth rates, 171
- Boulding, Kenneth, on Malthus and corollary that technology increases human misery, 165
- Boundaries, national, to be flexible, with rental prices for marginal changes in, 119
- Brazil, environmental damage in linked to lack of access to land, 21-23; need for international efforts at land reform in, as Amazon damage harms entire world, 22; government of favours landowners, 22; land speculation in, especially Amazon area, 32; as example of internal migration to alleviate population pressure, 73; and enclosure, deforestation, of Amazon forest land, 137
- Bury, J. R., on progress and providence, 163
- Busey, James R., on tenets of economic thought compared with those of other spheres of life, 27-28
- Business cycle, Malthus's embryonic ideas on, 61
- Canada, and enclosure conflict with Mohawk Indians, 137
- Capital accumulation, and productivity and wages, 78
- Cash economy, change to a cause of farmer's poverty, 97-99
- Castro, Josue de, in *The Geography of Hunger*, on poverty caused by colonial exploitation of resources, and worldwide effects of local hunger, 168
- CC-PP Game (Commonize the Costs But Privatize the Profits), adverse effects of, 173
- Child-rearing, costs of more commonized today, 174
- China, and example of Hutterite limit, 181
- Chuang Tru, fourth century B.C. laissez-fairist, 164
- Citizen's dividend. See Land rent
- Claims, on people and their labor products, in Locke, 115
- Clarke, Colin W. and Daniel Fife, on ecologic irresponsibility, 41
- Class, distinctions in result of unfair land access, 90

- Commodities, overproduction of for status demands, 92
- Commons, theory of needed to help solve population, socioecologic, other problems, ix, 25, 177-78; rights of access to and laws on, 2, 133-35; effect of technology and population growth on, pollution and overuse of, and rules governing, 12; extended vs. enclosed, 14; as global resources not arrogated to individuals or nations, 21; history of management of, 36, 95-96, 173-74, 175-79; as a model of political-economic system of environmental utilization, 37; Hardin's theory of as Weberian ideal type or logical construct, 37; preservation of dependent on socialized rent, other economic reforms, 41; lessons from on demographic and ecologic behavior, 52; managed vs. unmanaged, 88, 95, 173, 177-79; best procedures for generating objectives, hypotheses, models, and assessments of solutions for, including cost-benefit appraisal, 143-48; theory of opposed to providence, 172; tragedy of, 173; logical properties of model of vs. myth of, 179; irresponsibility of prevalent formula of, as CC-PP Game, 176; more aspects of than overuse and overpopulation, 176-77
- Kinds of:
- Last*: as part of global commons, 2; defined, 132; reduced pressures on through land value tax, 140, 143, 155-56; solutions to problems of, with goal of socioecologic balance, would help other commons, 143, 146; and need for incentives, financial and technological aid, 148; and Remnant, benefits to of land value tax, 155, 159
 - Remaining*: defined, and suggestions for, 130-32; two kinds of (*Last* and *Remnant*), 132; and need for sound laws to avoid injustice, violence, and war, 139; three reasons for problems of, 139-41; and irrational (exponential population growth) and rational (citizen action) behavior concerning, 143; international effort, needed to save, 142
 - Remnant*: part of global commons, claimed by nations, but not yet private property, 132; examples of conflict over, 136; and worldwide enclosures of, 136-39; land value tax on extracted resources of, 140, 155-57, 159
- Models for management of, for land tenure systems related to environmental use, 148-57:
- Business as Usual*, inadequate, with erroneous assumption that nation-state is natural governmental unit, possible free
- Commons — *continued*
- market variations, 153-54
 - Common Heritage of Mankind*, arguments for and against, 150-51; based on United Nations, 149-51
 - Free for All*, as seen in sea-bed, 149
 - Land and Liberty*, best of four alternative systems of environmental use, as it is equitable, efficient, ecologically wise, 155
 - Commonwealth, proposed ideal government which is economically fair and ecologically sound, 109; traditional claims that land of belongs to members of as inconsistent and conflict-provoking, 109; claims to land of should be based on rights of present and future individuals, not nations, 115. See *Lock; Territory*
 - Community, insurable risk of dissolution of as market determinant of value of community's territory, 119-20
 - Competition, among governments for citizens, 121-22
 - Condorcet, Marquis de, ideas of on freedom attacked by Malthus, 53
 - Conflict, inevitable result within nations over Remnant Commons and between nations over Last Commons, 136, 139; avoidance of with Last Commons land value tax, 154
 - Consensus, vital in change to Lockean proviso system, 126
 - Contraception, and Catholic church, 18; linked to foreign aid, 22-23; as vital complement to better nutrition, 167
 - Corporations, limited liability of for ecological damage, 152-53
 - Critical mass, affected by minute increments, 126
 - Customs, social, as human rules, including demographic, balancing quality of life and species survival, 48-49; as aid to humans' adaptation to nature, 58
 - Danger, Zone of: human disequilibrium with environment because of exponential growth rate, 52
 - Darwinian survival: dependent on quality of land tenure system, 49-50; of better fed as species economizer, 166
 - Death, as logical fate of human species, in Malthus, 59
 - Decentralisation. See *Government*
 - Deforestation. See *Africa; Brazil; Environment*
 - Demand, rise in per capita exceeds population rise, causing land values rise, 91
 - Democracy, eradicated in Germany because of enclosures, 137
 - Demographic transition: Hardin on, 19; imported only partially by less developed nations, 93; hypothesis and criticism of, 170-73;

- Demographic transition — *continued*
 reasons for popularity of, 173
- Demography, and pressure on environment, ix; subjectivity of, 44; benign and malign views of, 45; crisis in caused not by industrial revolution but ensuing changes in land tenure systems, 50; Malthus's ideas as foundation of science of, 61; cultural context of, 63. See Demographic transition; Population
- Denman, Donald, and Sea-bed Resource, 149
- Desert, result of human environmental abuse, 38, 84, 104
- Development, compact vs. sprawl, viii. See also Land
- Distribution: trickle-down theory of, 163; Lloyd's system of similar to Marx's, 173; limited by private property rights, 174-75; according to need as asymmetrical, non-reciprocal, and cause of inequality, poverty, 175-76
- Dorfman, Robert, on rent as unearned income paid for use of nonproducible resources, 86. See also Land rent
- Doubleday, Thomas. See Plethoric state
- Duggar, Benjamin Minge, Lecture program at Auburn U., with Hardin as lecturer, vii
- Earth, carrying capacity of: finite, though extendable by technology, 29; consequences of exceeding, 173
- Ecology: distortions of by government policies, 5-6; other possible remedies for problems of, 24; damage to as rationale for international approach to demographic problems of, 44; damaged by division between landed and landless people, 58; pricing of services of, 123; damage to during conflicts, 137-38; as intergenerational equity, 147n; and concern for unmanaged or poorly managed commons, 179
- Economies of scale, and human nature, 180
- Economists, neoclassical, on rent as excess earning over amount needed to retain present production use, 86
- Economy, growth of relative to population size and living standards, 1; mixed, as remedy to inevitable ruin under unmanaged commons, 177
- Edel, Matthew, on how shared land rent avoids Malthusian trap of low output growth with high population growth, 102
- Edmonds, Thomas Rowe. See Plethoric state
- Ehrlich, Paul, and *New World, New Mind*, 12; and *The Population Bomb* and *The Population Explosion*, with human species' fate as enslavement or death, 70
- Emigration, freedom of in commonwealth model, 116
- Enclosure movement: tragic effects of, 35; and Enclosure movement — *continued*
 resulting overuse of remaining commons, 36; laws on ecologically good but socially unjust, 41; coincident with Industrial Revolution, 61; in England, dividing Remnant Commons, 98, 136-37. See also Commons
- Entropy, and natural resources, 146
- Environment: demographic and ecologic factors in destruction of, ix, 6, 8, 21-23, 30-31, 38, 131; resistance to policy changes on, 9; and libertarians, 22; salvation of dependent on population control, 31, 183; George's concern for, 34, 62-63; benefits to from cheaper land, compact cities, 40; four models of utilization of, 40; humans' traditional self-limiting demands on, 45; present policies toward treat symptoms, not causes, 105; primary problem of due to unfair access to land, 105. See also Commons
- Envy, as taboo concept and word, with desires based on misinterpreted as rights, 182-83
- Equality, social, among humans anathema to Malthus, 53
- Equilibrium, in society under commonwealth model, 110
- Essay on the Principle of Population*. See Malthus
- Ethiopia, and exploitive land tenure system, 104
- Eugenics, inverted operation of, 19, 35n
- European Economic Community, and larger benefits of to larger farms, 91-92; conflicts in over fishing rights, 139
- Family, size: and government intervention, 1; cultural and economic aspects of, 18-19
- Famine, Sudanese, due to overuse of marginal land, 104
- Fecundity: as potentiality for having children, 166
- Fee Simple, as freehold ownership in private property, 135
- Fertility, as measure of actual production of children, 166. See also Population
- Fife, Daniel and Colin W. Clark, on ecologic irresponsibility, 41
- Food, increase in not limited arithmetically, 165
- Force, invalid territorial justification, as it can readily be supplanted by new force, 111
- France, shrinking farm size in due to subdivision, 63
- Free market, in true form would release underused land to those who need it, 63

- Knowledge, investment in as public good, 125
- Kuwait-Iraqi war, over natural resources neither created, 14
- Labour: in conflict with employers after loss of commons land, 67-68; at mercy of landlord in Latin America, 94; for wages instead of tenancy, 95; products of belong to laborer, provided land used does not exceed citizen's proportion, 116, 175; and capital, Labour — *continued*
product of as rental value from current and past use, 119
- Laissez-faire, includes rules, 145-46; as type of providence, 163; flawed in practice, 174-75. See also LaRiviere; Libertarians
- Lancaster, Kelvin, on income distribution as function of sale of factor services, 87
- Land:
commons vs. private ownership:
problems of include use of resources worldwide, human poverty, 23-25; community restrictions on use of, 25; common rights in, not nationalization of, 33; transition to private ownership, 46; communal access central to a society in harmony with nature, including stable population growth, 51; maldistribution of rights as poverty cause, 58, 62, 110; property rights in land erroneously considered by some as akin to natural rights, 60, require close scrutiny, because of environmental threats, 76, inequitable, ecologically destructive, 84, include a bundle of rights and restrictions, 85; effects of US enclosure on poor, 96; relations between rich and poor nations, 97; land as negotiable asset, 98, cumulative subdivision of, a poverty cause, 99; as 'positional good', 100; foreign ownership of in Africa, 104; use of, not perpetual ownership of, as solution to problems of poverty, war, environment, 110; finiteness of makes all claims to perpetual possession inconsistent with Lockean proviso, 114; surface and natural resource rights to differ, 114; inefficient use of and concern over Remaining Commons, 140-42; disadvantages of state ownership of, 152
- laws: on occupied or private land, 133-36; English common, as alternative model of use of, 157-58
- margin: government pressure on, 5; cultivation of affected by population rise, 32; intra-marginal, greater use of as poverty solution, 68; concept of marginal (rentless) denied by Malthus, 68-69; sub-marginal, overuse of and ecologic damage by farming or wrong development, 91; super-marginal, and underuse of due to speculation, 91
- monopoly of: fundamental cause of poverty, 28; as factor in population rise, and remedy through land value tax, 74; and power, 90
- reform: need for in Brazil, with world pressure to halt damage from Amazon forest destruction, 22; unsuccessful when based on subdivision, 63; examples of inappropriate, 94-95

Land — *continued*

rent, economic, of (also termed ground rent or pure rent): shaping New World destiny, viii; Ricardo's contribution of spatial dimension of, 54; full capture of enables removal of taxes from labour and capital, 65; alternative concerning application of, 77; environmental, population crisis if appropriated privately, instead of captured by government for equal benefit of all, 77; as profit or income (actual or imputed) accruing to land, as payment for resource quality, 86-87; citizen's dividend as fair distribution of, 87; of land as part of global commons, 88; private appropriation of root of Africa's problems, 104-5; of all world territory to be equitably divided between all humans and future generations of humans, 117; defined, and comparison with a true tax, 154-55; belongs to no individual, since land is not the creation of any individual, 154; selling price as multiple of, 155; to be shared between nation-state and international body, 156; speculation in land curbed by capture of, 176-77

tenure systems: evolved as humans' sustenance modes changed to survive in changing changing environment, competing with other species, 49-50; as human rules to harmonize group relations and ensure ecologic viability, 49; history of as tribal-based or private owner-based, 50-51; private owner-based and exclusionary power, 50; misalignment of with production system and ecology, 52-53; of common rights as population stabilization mechanism vs. private rights, as population conflict mechanism, 58; Malthus's recognition of bad effect of in colonies but failure to admit that Britain's enclosures had same effect at home, 58; as root of population problem caused not by pressure on the environment but unequal access to resources, 74; centrifugal effect of, causing urban sprawl, under private rights system, 74; Roman system of cause of current problems, 84; centrifugal and centripetal effects of, 91; damaging effect of by developed nations on less developed nations, 94; as universal tools of the powerful, 95-96; effect of on socioeconomic structures, 97-98; reform of only solution to poverty, 100; of USA developed based on privilege, not equity, 152-53

value tax: similar ideas on of Malthus and George, 3; exemption of improvements on land (which are rightful products of labor and capital, to be bought and sold)

Land — *continued*

from, 25, 155; proposed by Malthus to solve Irish poverty, 29; failure to adopt and resultant ecologic damage, 32; as ecology preserver in George's fur seal example, 33n, as virtually self-regulating, efficient and uncorrupt, 38-39; secures the advantages of both commons and enclosures, 41; by rectifying distribution, liberates production, 40; neutralises landlord's monopoly power, 62; as fiscal device to bridge institutional divide, 65; centripetal effect of, attracting people to underused urban sites, 73-74; in Japan, 92-93; withering away of since feudal era, 98; India's failure to impose benefits large landowners who receive goods, services at little or no cost, 101; need for individual to estimate amount used, to compensate others if used excessively, 127; as equitable, efficient solution for unused or underused land (Remaining Commons), 142; as incentive to efficient land use, 155; upon less than total land value, for market effectiveness, 155; best way to assure payment of rent to society (which created land value) rather than to individual (who did not), 155; ecologic advantages of, 159.

See also Commons, Territory

Landowner: power of to exclude people whose lives depend on land access, 60; depressing influence of on economy when their purchases do not equal rising production, 61; distinction between landless and, 97; transformed responsibilities of in Europe at end of feudal era, 98

LaRiviere, and l'ordre naturel promoted by laissez-faire, 164

Latifundia, as large estates with nonuse or underuse of land, 22-23, 94

Latin America: as example of exponential, ecologically unsustainable population growth due to institutional failure, 58; land tenure history of, 94-95. See also Redcliff

Law: statutory augmented by administrative, 38; and corruption, 38; statute, English, 135; German common, replaced by Roman, 137; importance of, including enforcement, in land tenure systems, 147

Leases: auction of resources proposed, 114-15, 156; advantage of over sales of resources, 158

Libertarians, and environment, 15, 22, 30-31, 110, 112-13, 160. See also Laissez-faire
